

NeuroTal

The Prefrontal Exchange

"Focus is the new Gold. Discipline is the only Currency."

01 • THE PROBLEM

The Collapse of the Attention Economy

Limbic Dictatorship

TikTok, Shorts, Instagram — platforms engineered to exploit the impulsive, dopamine-seeking brain.

Willpower Doesn't Scale

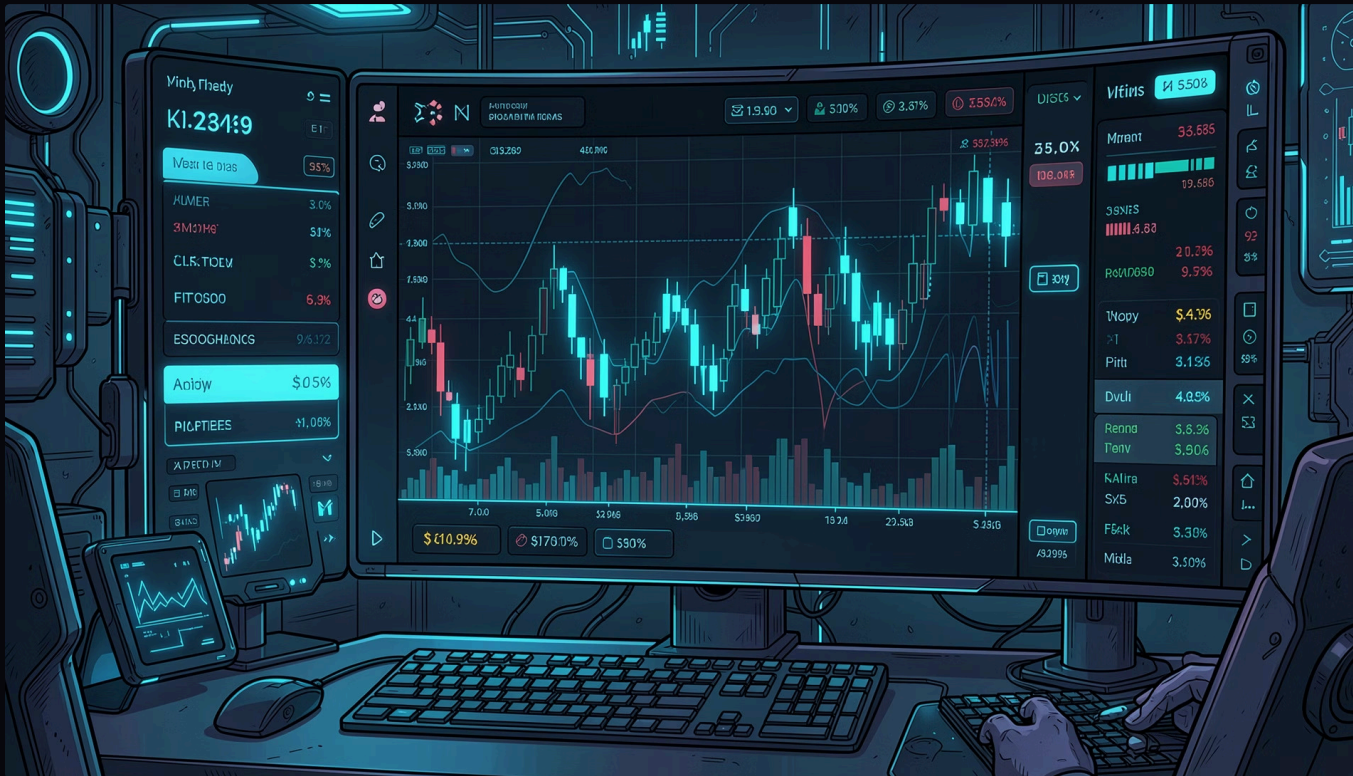

People don't change through lectures. Raw discipline fails under algorithmic pressure.

What Actually Works

Hard incentives: economics, status, competition, market pressure.

Weaponize those mechanics.

What Is NeuroTal?

NeuroTal is a behavioral finance platform that transforms human focus and cognitive discipline into a live market economy.

✗ Not a Habit Tracker

No cute gamification. No streaks for show.

✗ Not a Meditation Tool

This is a competitive cognitive exchange.

✓ The Core

Attention, impulse control, and deep work are measurable economic assets.

Two Opposing Tokens. One Cognitive Balance.

● \$PREFRONTAL

Blue-Chip Cognitive Asset

- Minted by: deep work, sustained focus, delayed gratification
- Scarce, high minting difficulty, long-term value
- Unlocks elite, high-trust networks

● \$LIMBIC

Volatile Degeneration Asset

- Minted by: doomscrolling, rapid task-switching, chaotic consumption
- Inflationary, highly unstable, emotionally reactive
- Functions as the market's behavioral mirror

The Social Signal: Your Cognitive Tier

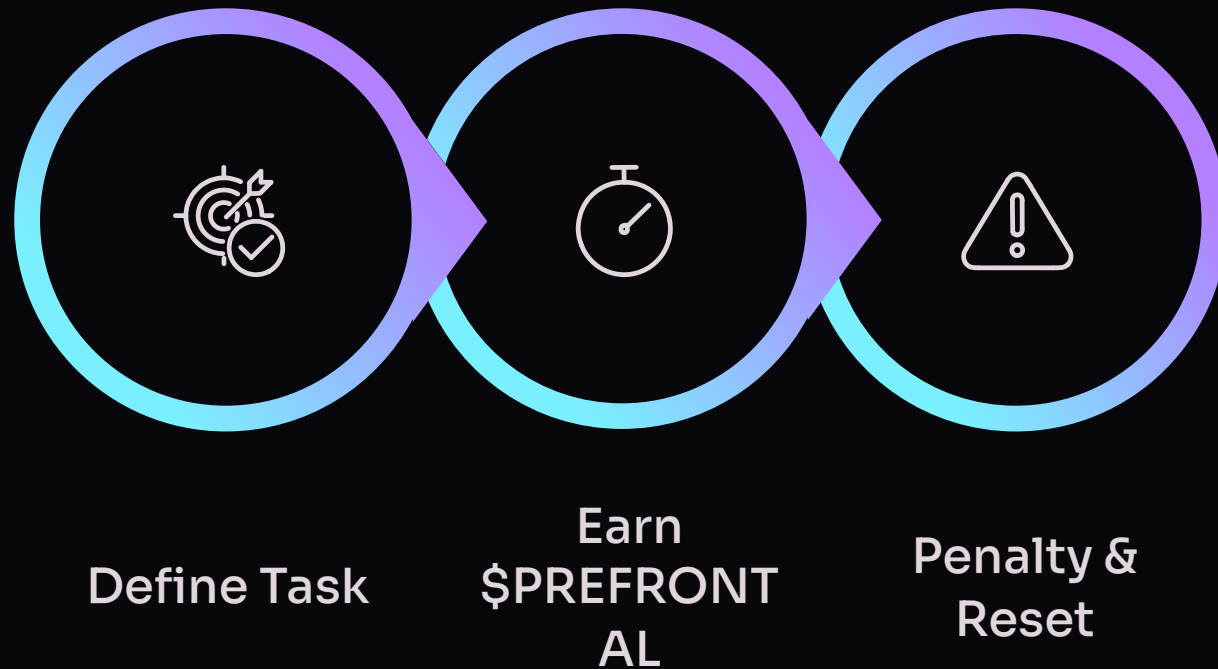

Your profile displays a dynamically calculated tier based on your **\$PREFRONTAL / \$LIMBIC ratio**. Public status creates real social pressure to improve.

- ❏ **Visual Identity:** Soldier = blue/silver stable glow, military aesthetic. Monster = red/orange glitch animation. No one wants to be a Monster in public.

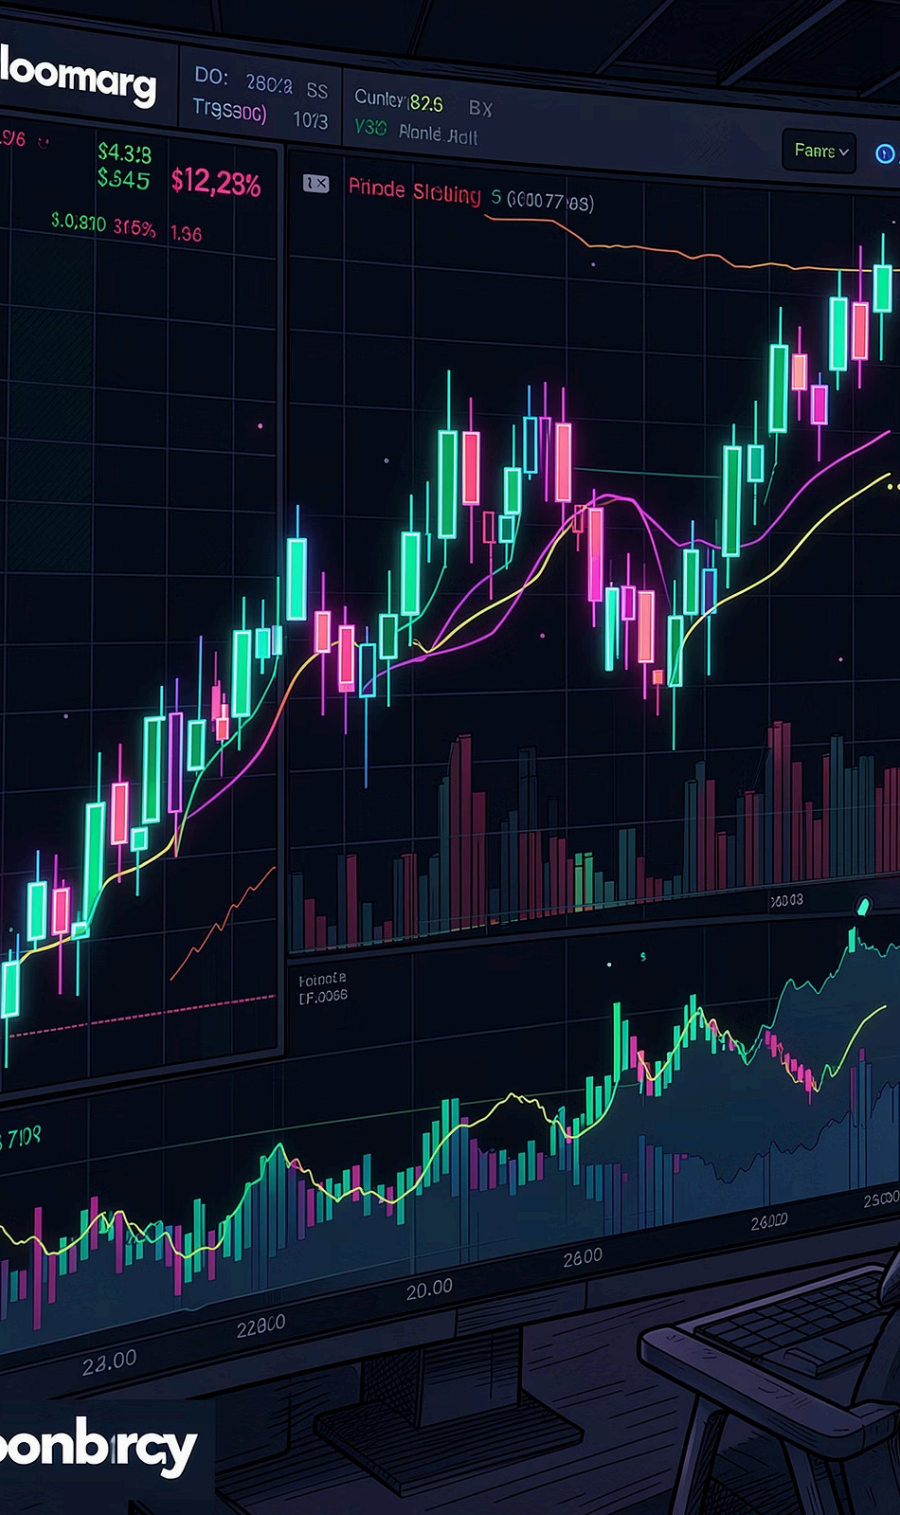

Proof of Focus (PoF)

No medical hardware. No neural interfaces. The system runs entirely on **Behavioral Inference Models**.

Pattern analysis tracks context switching, app interaction frequency, scrolling velocity, and screen interaction patterns. Optional biometric integrations provide deeper validation.

06 • MARKET INTERFACE

The Cognitive Terminal

The UI visualizes personal cognition as a live trading market — reminiscent of Bloomberg or TradingView.

Candlestick Charts

Two opposing live charts (\$PREFRONTAL vs \$LIMBIC) mapping your day in real time.

Real-Time Metrics

Asset balance counters, session timers, and distraction trackers — always visible.

Tier Badge

Prominent status display showing current rank and progress to the next tier.

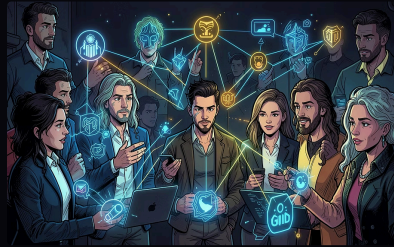

NeuroTal = LinkedIn 2.0

"Show me your candlesticks, and I'll trust you with my project."

Focus Duels

Head-to-head, real-time challenges based on focus endurance. Put your score on the line.

Guilds & Clans

Trust networks and teams built entirely on verified discipline data — not résumés.

Reputation Staking

Back your commitments with your hard-earned cognitive score. Market-verified reliability.

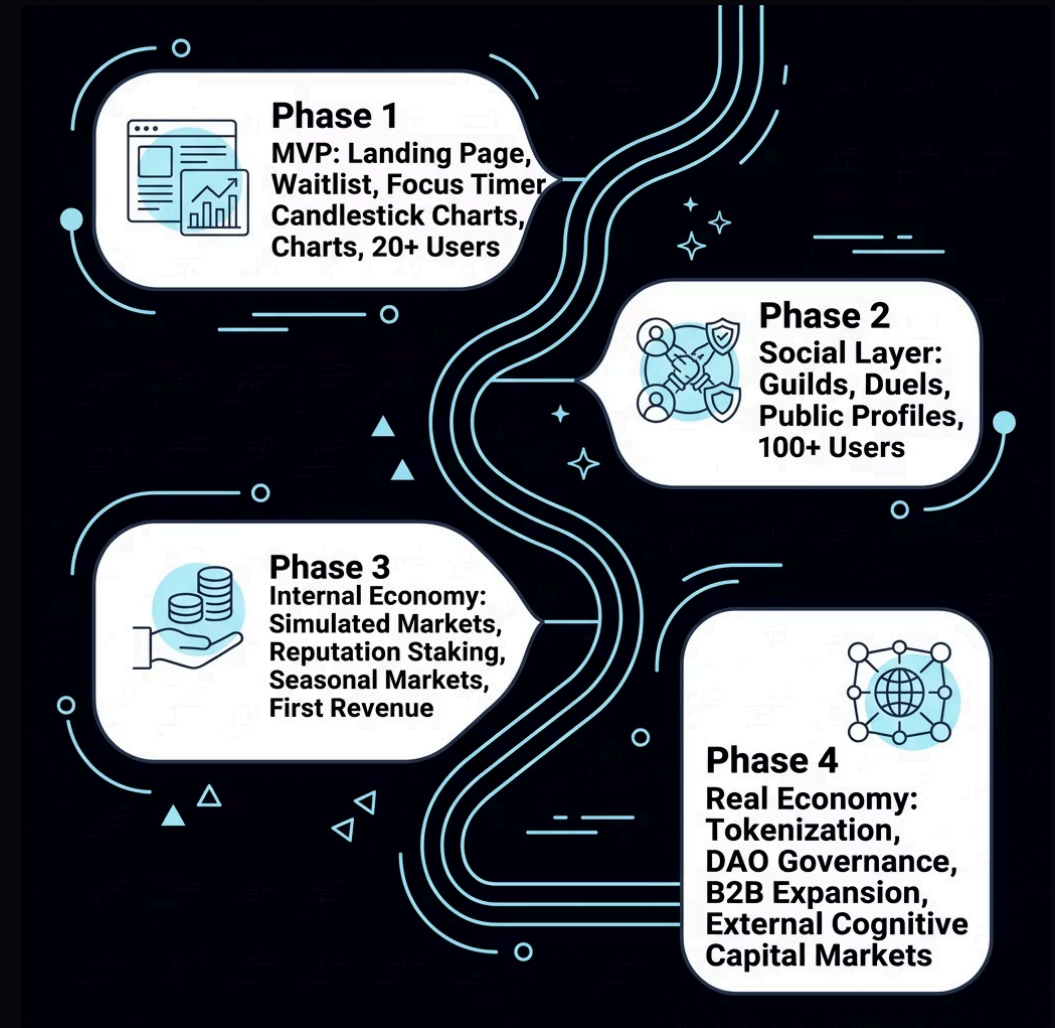

Monetization & Roadmap

Freemium SaaS

- **Free (\$0):** Basic dashboard, focus timer, 7-day history
- **Pro (\$9–15/mo):** Unlimited history, advanced analytics, guild access, leaderboards
- **Elite (\$29/mo):** Verified badge for X/Discord/Telegram, Focus Duels

B2B — Phase 2+

NeuroTal for Teams — "Strava for organizational focus."
Target: **\$50–200/mo** per team.

CORE INSIGHT

The Next Economy Will Monetize Cognition

The Old Economy

Monetized human **labor**.

The Current Economy

Monetizes human **attention**.

The Next Economy

Will monetize human **cognition**.

NeuroTal — Invest in your Prefrontal.
